

State-of-the-art MRI

{slimbox align=|right| padding=|5| title=|Vision Imaging offers state-of-the-art MRI services.|

album=|mri|}images/stories/kingston/mri.jpg{/slimbox}MRI has become one of the most commonly used diagnostic methods prescribed by physicians today. The painless procedure uses magnetic fields and radio waves to generate images of your soft tissues.

It provides a quick and accurate diagnosis for your physician, which can reduce the need for exploratory surgery or other diagnostic procedures with more serious risks.

Vision Imaging of Kingston offers two distinct types of MRI units – open and traditional. While both produce similar results, some patients feel more comfortable in the open MRI unit. Open MRI units are also better suited for pediatric and elderly patients. On-site sedation is also available for patients who become stressed by the MRI scanning procedure.

Plus, Vision Imaging of Kingston has met all of the rigorous standards to achieve American College of Radiology accreditation in MRI.

The next time you need an MRI, be sure to tell your doctor you would like to go to Vision Imaging of Kingston.
