

## Vascular Access Centers

{slimbox align=|right| padding=|5| title=|Our specialized professionals can perform non-invasive, yet critical, medical procedures in an outpatient setting.| album=|mri|}images/stories/kingston/vac.jpg{/slimbox}At Vascular Access Centers (VAC), our goal is to achieve enhanced patient care through clinical excellence and unparalleled service. We improve our patients' quality of life by providing expedient care by a specialized team of professionals. Our focused care leads to optimal clinical outcomes and technical successes by our dedicated team.

Our physicians are among the nation's leaders in vascular access care. Vascular Access Center's highly skilled Interventionalists are subject matter experts in vascular access and endovascular care. VAC physicians are Board Certified in Interventional Radiology or Interventional Nephrology. Some VAC physicians were among the first certified by the American Society of Diagnostic and Interventional Nephrology. VAC physicians have over 50 years of experience in the care of patients with vascular issues using the latest imaging techniques and advanced procedures. Physicians practicing within the VAC framework have the resources and support to improve patients' lives.

Services provided by Vascular Access Centers include comprehensive dialysis access maintenance including thrombectomy/thrombolysis, fistulagrams, fistula maturation procedures, vessel mapping, and complete catheter services.

Several of our centers also offer expanded services including non-invasive placement of inferior vena cava (IVC) filters to help block blood clots, central venous access for oncology, nutritional and medication delivery, varicose and other vein anomaly care, peripheral arterial disease (PAD) and venous ulcer or non-healing ulcer treatments.
